

ENVIRONMENTAL WEEDS

HERBACEOUS WEEDS

Introduced with early European settlement and spread in animal droppings e.g horses, these annuals and perennials also spread easily through seed dispersal by wind, water and birds. They will be found beside roads, paths and throughout reserves and are especially a problem in disturbed sites being revegetated. Eradication may be achieved with the use of herbicide or hand digging and pulling. The latter method is best done when no seeds have formed.

For information on identification, control or removal, contact the Great Ocean Road Committee on 5261 2496, ANGAIR on 5263 1085 or Anglesea Coast Action on 5263 3327.
